

```
import time
from plyer import notification

if __name__ == "__main__":
    while True:
        notification.notify(
            title = "ALERT!!!",
            message = "Hello Bhai Work Hard for Life Mate",
            timeout = 10
        )
        time.sleep(3600)
```

The Code I have used here for 3600 seconds timer

Here I have used using Python Code (Using it I have got Notification) As You can check Screen Shot)

It gives me every 20 seconds here

```
import time
from plyer import notification

if __name__ == "__main__":
    while True:
        notification.notify(
            title = "ALERT!!!",
            message = "Hello Bhai Work Hard for Life Mate",
            timeout = 10
        )
        time.sleep(20)
```
